Languages

Spanish - Native

English - B2
Professional Working Proficiency

Skills

Backend: .NET Core, C#, Node.js, TypeScript, SQL Server, REST APIs

Architecture: Clean Architecture, Microservices, Distributed Systems, SOLID

AI & Automation: LLM API integration, OpenAI/Claude APIs, AI-assisted development, prompt engineering, agentic workflows

Frontend exposure: Angular, Vue.js, JavaScript

Cloud & DevOps: Azure, AWS, Docker, Kubernetes, GitHub Actions, Azure Pipelines, Jenkins

Profile

Senior Software Engineer with 5+ years of experience designing, modernizing, and supporting business-critical backend systems across B2B ecommerce, academic platforms, payment workflows, CRM integrations, and cloud environments.

Focused on backend architecture, enterprise integrations, production reliability, cloud modernization, and applied AI automation through LLM APIs, agentic workflows, and AI-assisted engineering practices.

Known for connecting technical execution with business impact by partnering with stakeholders, investigating root causes, reducing operational friction, and making critical workflows more scalable and maintainable.

Employment History

Senior Software Engineer, Softtek | Clients: Kaplan, Bisk | Remote, Colombia

JAN 2023 - PRESENT

- Led integrations across university APIs, Salesforce CRM, HubSpot, CyberSource, and InterPayments, reducing recurring integration incidents by ~25%.
- Implemented asynchronous messaging with RabbitMQ to publish and consume payment-related events between services.
- Built an in-app AI chatbot in .NET with Anthropic's Claude API that guides students through enrollment, grounding each response in live data retrieved from the application database and CRM.
- Partnered with business, QA, DevOps, and product stakeholders to trace production issues end-to-end, identify root causes, and deliver sustainable fixes beyond field-level changes.
- Built agentic AI workflows with Claude and Claude Code (skills, subagents, CLAUDE.md), applying role-based system prompts, strict grounding to prevent hallucinations, explicit fallbacks, and temperature tuning.
- Improved release reliability by adding scheduled jobs with retry processing and structured logging, shipping Docker-based deployments to AWS through Jenkins and Azure Pipelines.
- Supported the Azure migration by moving storage, caching, and secrets management to Blob Storage, Redis, and Key Vault.

Senior Software Engineer, CI&T | Clients: Coca-Cola, Caret Legal | Remote, Colombia

AUG 2022 - JAN 2023

- Owned backend and full-stack delivery across legal-tech and B2B ecommerce platforms using .NET Core, Node.js, TypeScript, SQL Server, Azure, Angular, Vue.js, and Clean/Hexagonal Architecture.
- Led Azure modernization using Azure Functions, adding observability through Azure Monitor and Application Insights.
- Designed WhatsApp commerce integrations connecting Infobip, chatbot workflows, shopping-cart experiences, and external bottler providers.
- Managed production releases through CI/CD pipelines on GitHub Actions and Bitbucket, deploying Docker containers to Kubernetes with unit, integration, and E2E test coverage.

Skills

Integrations: RabbitMQ, Salesforce, HubSpot, WhatsApp API, CyberSource, Redis

Testing: Unit, Integration, E2E, CI/CD

Software Engineer, Yuxi Global, Remote, Colombia

JAN 2022 - AUG 2022

- Supported Azure modernization and refactoring of legacy applications, improving scalability, cloud readiness, and operational risk posture.
- Improved backend reliability by implementing Redis caching and centralizing secrets/configuration with Azure Key Vault.
- Delivered REST API integrations and supported Azure DevOps automation under Scrum, improving maintainability and reducing manual delivery effort.

Software Developer, MVM Ingenieria de Software, Remote, Colombia

MAY 2021 - JAN 2022

- Developed backend and data-access components with ASP.NET, Entity Framework, and Oracle SQL, improving performance and data reliability in key workflows.
- Applied layered MVC architecture and design patterns to improve maintainability and reduce rework.

Software Developer, Ingenieria de desarrollo IDL SAS, Bogota

JAN 2021 - MAY 2021

- Built and shipped features for a spare-parts management system supporting automotive operations for brands such as Chevrolet and KIA.
- Optimized SQL Server queries, stored procedures, functions, bulk operations, and linked-server inventory retrieval, improving response times and reducing intermittent failures.

Education

B.S. in Systems Engineering, Universidad Central

Expected Graduation: 2027

Courses

AWS Academy Cloud Foundations, Amazon Web Services (AWS)

OCT 2024

AWS Academy Introduction to Cloud, Amazon Web Services (AWS)

OCT 2024

Scrum Project Management Fundamentals, CertiProf

MAR 2021 - APR 2021
